Project Name	ShopSmart: Your Digital Grocery Store Experience
Maximum Marks	2 Marks

Problem – Solution Fit:

Customers face inconvenience due to physical grocery shopping, long queues, and limited product visibility. Small stores also struggle with manual order and inventory management.

ShopSmart solves this by providing a web-based platform where customers can browse products and place orders online, while admins manage users, products, and orders efficiently.

The solution matches customer behavior by using a simple digital interface, improving convenience, saving time, and organizing store operations effectively.
